We tried start your own chain explorer (with Big Dipper) but we got some error from our nodes when we tried to build the big dipper database:

http://135.181.40.105:1317/validatorsets/150949

{"error":"header has next vhash 813D269C52E0507529410ACE7EE25179B7377F42C4F43FE771CD9E3E57FF8C28 but next valset hash is E7ECD078760D01B36423A565C52309E2096D69CEC29936CE4D54079096744362"}

Is this a chain related issue or a rest/lcd server issue or something else?

Any ideas are very welcome…
