After a successful couple of months operating a validator with almost 100% uptime and a perfect voting record, we announce with a heavy heart that StableLab will wind down its dYdX validator and governance operations for the time being.

The validator will be deprecated on 2024-06-15. (in 44 days)

Please unstake all your tokens before that day.

We want to thank all the beautiful members of the dYdX community for their support and cooperation, and we are always just a message away if you need us.

You can find me at @raphbaph

on Twitter.

Special thanks to [@RealVovochka](#) and [@LeonoorsCryptoman](#) for their insights and support and to [@Josh_E_Wa](#) and [@charles](#) for guidance and direction.

dYdX will always have a special place at StableLab, and we will happily re-engage when the right time comes.

Godspeed!
