FAQs

- Is there any benefit to self-host a relayer?
-

It's mainly a trust issue. If you don't trust us, run your own relayer.

- Is the relayer open-source?
-

Yes, see[Source Code](#) for access

- How does the relayer impact validator transaction throughput?
-

The relayer should improve TPS conditions as it handles sigverify and packet deduplication, reducing the amount of duplicate packets that hit your validator.
