Getting Started

LI.FI is a multi-chain liquidity aggregation protocol that supports any-2-any swaps by aggregating bridges and DEX aggregators across +20 networks. [1] page Install LI.FI SDK Our JS/TS SDK can be implemented in any front- or backend so that you can build your UX/UI around our bridge & swap functionalities. It furthermore handles all the communication between our smart routing API and smart contract and provides outstanding event and error handling.

⚙ page LI.FI API Our REST API gives you all the information and allows deeper and custom integrations.

page LI.FI Widget Overview Implemented in 5 minutes, the widget helps to onboard users from anywhere.

page LI.FI Link Parameterization If you have no time to integrate us, link to our website with your token & chain pre-configured.
