Bundles

Bundles are finally here! Bundles allow one to send a list of transactions that get executed sequentially, atomically, and all-or-nothing. Bundles can be used for atomic arbitrage, liquidations, batching defi operations atomically, and more.

Jito-Solana

Jito-Solana is an open-sourced and audited validator client based on the work of Solana Labs validator [client](#) . It unlocks more efficient transaction processing, bundle processing, MEV payment collection, and direct shred sending.

[Features](#)

Jito Relayer

The relayer acts as a transaction processing unit (TPU) proxy. It filters and verifies transactions for multiple authenticated validators on a separate server to ensure validators can devote resources to executing transactions.

[Features](#)

MEV Payment

Take a commission and distribute MEV to stakers in a custody free manner

[Tip Payment Program](#)
