Hi, I'm trying to generate proof with Noir JS for a linear regression circuit, but the issue is for same circuit (with dataset size changed) with fewer data size, the proof is generated and verified correctly, but when I increase the data length I encounter this error.

Error [RuntimeError]: null function or function signature mismatch

[

But if I try running nargo prove

command with same inputs, the proof is generated correctly.

Here is my nargo info

output:

[

and my nargo --version

:

Thanks for the help.
