Moralis Quickstart - Crypto Data APIs for Arbitrum

[Moralis](#) is a blockchain data platform that provides developers with all the data they need to build better blockchain applications. From NFT data, token data and price data, through to raw blockchain data and RPC nodes, Moralis offers a wide range of products that cover all major crypto and blockchain use cases, and it supports Arbitrum together with all other major EVM chains.

Quickstart Guide

Get started with Moralis APIs on Arbitrum by checking out our [Get Started Guide](#) , or watch some of our popular [Youtube tutorials](#) .

Moralis APIs

All Moralis APIs have support for Arbitrum and across all other major EVM blockchains. All endpoints have powerful filtering capabilities.

Endpoints Please check out the [Moralis API Reference](#) to see all the available API endpoints.

Wallet API

With Moralis [Wallet API](#) you can get Wallet balances for tokens, NFTs and native assets, get full wallet history, net worth and a lot more.

NFT API

With Moralis [NFT API](#) you can get NFT data like collections, owners, prices, images and metadata.

Token API

With Moralis [Token API](#) you can get ERC20 token data like prices, ownership, metadata, transfers, approvals, liquidity, mints and burns.

RPC Nodes

Get access to powerful RPC nodes on all major chains with [Moralis Nodes](#) . [Edit this page](#) Last updatedonMar 19, 2024 [Previous Flair](#) [Next PARSIQ](#)
